Macrophylla Vibrant Verde Blue

Joining forces for growth

Collaboration is key to growth in our industry. It's all about working together to meet the evolving needs for new hydrangea genetics, varieties and characteristics. This spirit of partnership is at the heart of BloomChampion.

The collaboration takes root in 2021 when two leading horticultural companies – Lendert de Vos B.V. and De Jong Plant B.V. – join forces to found BloomChampion. It's a perfect match. Both family companies bring complementary experience and expertise to the partnership.

Lendert de Vos B.V. & De Jong Plant B.V.
Team BloomChampion

“Collaboration is key to growth in our industry.”

Lendert de Vos B.V.

Lendert de Vos B.V. has a 25-year track record of successfully breeding, testing, propagating and cultivating outstanding hydrangeas. Operating at the front of the development chain, Lendert de Vos B.V. specializes in providing growers with top-quality cuttings and young plants. Scouting new varieties around the world, it presents cultivars that can't be found anywhere else. Every step of the development process is focused on meeting your needs as a grower.

De Jong Plant B.V.

De Jong Plant B.V. brings more than 40 years' experience in developing and growing hydrangeas that are aligned to the needs of the retail trade. De Jong Plant B.V. constantly evolves its offering by presenting high-quality new varieties and innovative plant brands and concepts. By providing continually improved characteristics, tailor-made concepts and greater choice, De Jong Plant B.V. fulfils the changing needs of plant retailers, garden centers and big-box stores and their customers.

Macrophylla Mysterious Pink

Growing together

BloomChampion serves you as a grower with the best genetics, great-looking plants and a wide selection. We make the difference by focusing on your needs as a grower during every step of the process. We keep growing so you can too. By growers for growers.

Creating hydrangeas that surpass your expectations doesn't happen overnight. We need ten years to develop a new variety that meets your criteria as a grower. And during that decade-long process, we constantly test, select and eliminate. So only the best make it to the finish.

The ten-year journey to a new variety

2 | Harvesting seeds

Seeds are harvested from the new cultivar type and tested to determine quality and purity.

1 | Crossbreeding

Two or more plants are crossbred to develop a new cultivar with new traits.

3 | Planting seeds

The selected seeds of the new cultivar are planted to cultivate plants that are replicas of the parent plants.

4 | Growing for one year

The plant grows in the first year, but only produces foliage. After this growth period, the plants are selected that proceed to the next stage.

6 | Cultivating cuttings

After four years, cuttings from the selected plants are cultivated in batches of ten. A selection is made from these batches, with only the successful plants proceeding to the next stage.

8 | Dawn of a new variety

After ten years of cultivation and testing, a new variety is born.

5 | Growing for two years

The chosen plants go on to flower in the second year and once again the plants are selected that will go forward to the next stage.

7 | 10 years of developing

The cultivars are grown and brought to flower on a larger scale during this intensive development stage that takes more than ten years. During this decade-long period, they're subjected to extensive testing under various conditions, including lighting or no lighting, and assessed to see how they perform during transport and in cold storage. By multiplying the genetic material over many years, any flaws or weak points come to light.

The newest genetics for champion results

Ten years of development goes into developing new varieties of hydrangea macrophyllas and paniculatas. But we don't stop there. We continue to critically assess the products and process in search of room for improvement. We don't outsource the preparation process but remain closely involved at every stage. Anticipating your needs as a grower, we ensure that you can minimize the use of plant growth regulators (PGR). This saves you time, money and effort and ensures optimum retail-ready plants.

Our painstaking development process has resulted in a unique range of new varieties of macrophyllas and paniculatas. With distinctive genetics, superior traits and blooming beauty, they've got everything it takes for growing success. BloomChampion is your source for the newest genetics, varieties and characteristics.

By growers for growers.

"Macrophylla works
its magic"

Our blooming

Macrophylla

Our macrophylla varieties are magical in every way. With easy branching, compact growth and firm flowers, these cultivars have all the right stuff for great growth and top performance. Super strong stems mean they keep standing strong. And man can these babies bloom. We're talking big, beautiful blooms that create a sea of flowers and rebloom every season. And with so many colors and varieties to choose from, you can turn every patio or border into a vibrant kaleidoscope.

Macrophylla Vibrant Verde Blue

“You can make this variety retail ready much faster than other hydrangea varieties”

Macrophylla Mysterious

Our Mysterious variety has been developed with your needs in mind. You can make this variety retail ready much faster than other hydrangea varieties, with the plants flowering within eight weeks. Available in pink and blue, there are three different color shades on each plant. The colors also change to lighter, darker and green during the season. Mysterious develops compactly and branches and sets bud easily. With strong reblooming, Botrytis-resistance during cooling and suitability as both an indoor and outdoor hydrangea, it's the perfect variety for growers who want an easy-to-grow solution that can be produced in greater volumes and are ideal for retail sales. No wonder that the Mysterious hydrangea macrophylla was chosen as the best Plantarium Novelty 2017.

“The result of long-term testing and extensive selection”

Our blooming
Paniculata

Our paniculata varieties are the result of long-term testing and extensive selection. These cultivars are distinctively strong, compact and winter hardy, with a long blooming period. As such they are perfect as eye-catching patio plants and for planting in borders. Expect abundant blossoms creating a sea of flowers, with the color changing through the season. Add in rich branching, flowering on one-year-old wood and suitability for all climates and you've got a perfect paniculata.

Paniculata

Fresh Pink

Fresh pink is beauty in motion, staying strong and healthy during transport. It bursts into bloom in July with sturdy white flowers. The flowers then gradually turn to pink through October. They stay in bloom all winter for a welcome dash of color on dark days.
